

Abderrahmani Idrissi Hamza

I'm a front-end developer passionate about creating great websites. I enjoy bridging the gap between engineering and design — combining my technical knowledge with my keen eye for design to create scalable and efficient applications while providing engaging, pixel-perfect user experiences.

I have a wide set of skills that can be applied to this particular job. However, one of the greatest characteristics I have is being able to grasp new concepts and ideas easily and efficiently.

Projects (for more projects and details check my website www.idrissihamza.com)

Project management app.

"This application brings a team together to plan, track, and collaborate on any project. You can create a project, assign it to a specific team, collaborate via chat option specific to each project, check the connected members of the team and many more features. It's built with React, Firebase. The styling is done with Tailwind CSS"

My personal website.

"My personal portfolio where I showcase some of the projects I have worked on. It's built with React, The styling is done with Sass. take a look to find out more info about me"
